Special points of interest:

Recycling!

We have been getting many phone calls from people asking about how to recycle their old computers and computer parts. We now have a link on our website that gives you the name, address, and phone numbers of a few companies in your neighborhood. Thus if you go onto our website at www.comptsh.com then go to links, we have a page full of companies that will recycle computers.

Find A Computer Doctor In Your Area!

Most People do not realize that although Computer Troubleshooters' main office is located in Cloverdale, we have expanded into Surrey, Langley and White Rock! So if ever you need computer repair or just someone to ask advice on, we are your one phone call solution.
604-575-9590.

Dear Computer Users:

We hope everyone had a nice Holiday and is well rested for the New Year! We certainly are! And we are ready to help you get through 2008 without any major problems.

Leasing From Computer Troubleshooters

From January 2008 Computer Troubleshooters will be furthering your one stop shopping experience by offering clients the ability to lease their server, software and install purchases. We have obtained the services of two local reputable Leasing Companies to offer their services. We are hoping this will enhance your experience with Computer Troubleshooters. We are looking forward to offering this service to you during the year. Please contact Valentina for an application form and procedures. 604-575-9590

Computers are a Part of Everyday Life!

Computers are commonly used items in many areas. It is an important thing to people, especially the people who run organizations, industry, etc. . . Almost anything you know is run or made by computers. Cars and jets were designed on computers, traffic signals are run by computers, most medical equipment use computers and space exploration was started with computers. Most of the jobs today require the use of computers. These 'mechanical brains' made a huge impact on our society. It would be hard if we didn't have the computer around.

Let's visualize a world without computers. People in the medical field wouldn't have found a lot of cures to diseases, since most cures were found with the help of computers. Movies like Jurassic Park, Toy Story, A Bug's Life or Godzilla would never have been made without computers because they used computer graphics and animation in them. Pharmacies would have a hard time keeping track with what medications to give to patients. Counting votes would be impossible without computers and most importantly, space exploration wouldn't be possible without the help of computers. It's a pretty tough life without computers. Some may not agree and say, "Well, we don't need computers to live on." They maybe right but mostly, they are wrong. Computers help in curing diseases, make entertainment a lot better, keep track of important records, etc. . . Without computers, all this wouldn't be possible.
