**Think Your Tape Backup is Keeping the data
on your computer safe from Loss or
Corruption?
You won't After Reading This...**

If you can't afford to go without your company data for hours—possibly even days or weeks—and you are using a tape backup system, then I have some alarming news...

The Average Failure Rate of Disk and Tape Drives are Over 50%

Incredible, isn't it? But what's really dangerous is that most companies don't realize it happened until it's too late because no one is verifying the backup system.

That's why thousands of businesses lose millions of dollars worth of data to disasters like viruses, fires, power outages, theft, equipment failure, and even simple human error. In almost every case, these businesses had some type of backup system in place, but were shocked to find out it wasn't working when they needed it most.

The Single Most Important Thing You Must Do to Protect Your Data

If your data is important to you, then you absolutely **MUST** have an off-site backup system in place. The benefits are obvious:

- Your files are automatically backed up every night right over the Internet. No more rotating and storing tapes—one more important item off your to-do list!
- Your data is safe from fire, floods, storms, viruses, hackers, hardware malfunctions, and human error!
- You can back up ALL of your data and not be limited to the size of your tape drive.

Want to know for sure if Your Backup System is Protecting Your Data? A **FREE** Data Security Audit Will Reveal the Truth!
